Talento EFT Terminal

Easy to Use and Secure

The big, bright screen, the simple keyboard with ATM - like function keys and the contoured ergonomic design make the Talento extremely user friendly. For transactions requiring PIN entry, Talento offers either an integrated or handheld PIN pad that meets all domestic and international security standards.

Feature-Rich, Superior Technology

The powerful multi-tasking application running inside Talento reduces customer and operator wait time. Multiple operations such as pre-dialing at the swipe of the credit card, printing during transaction authorization, and receipt printing as the customer signs the merchant copy, all help speed overall transaction time. Talento's retail/restaurant application allows credit, debit, EBT, check authorization, electronic check, mail order/phone order, and smart card acceptance.

Flexibility for Processors and Merchants

Talento offers numerous features that provide a flexible, yet secure transaction process. Applications can be set up and changed either through direct or remote downloading with password protection. Merchant's logos can be customized on the receipt and their names can be displayed to enhance identity and awareness. Settlement is facilitated by the ability to reprint any receipt from the current batch. Errors can be found quickly and adjustments can be made immediately.

Adapting to EFT Industry Changes

Talento protects the merchant's investment by providing memory upgrading, smart card availability, and the ability to interface various peripherals such as check readers, scanners, keyboards, and future devices as they become available.
